# Proposal Evaluation Form

**EUROPEAN COMMISSION**

Digital Europe Programme (DIGITAL)

## Evaluation Summary Report

**Call:** DIGITAL-2025-BESTUSE-TECH-09

**Type of action:** DIGITAL-SIMPLE

**Proposal number:** 101318339

**Proposal acronym:** EUDIW PACT

**Duration (months):** 24

**Proposal title:** EUDIW – PACT (European Digital Identity – Partnership for Alignment, Certification & Testing)

**Activity:** DIGITAL-2025-BESTUSE-TECH-09-WALLET

**Abstract:**

The EUDIW PACT project seeks to accelerate the development of harmonised and trustworthy certification frameworks for the European Digital Identity (EUDIW) ecosystem. As Member States move toward deploying EUDIW solutions, establishing clear, consistent, and actionable certification schemes is critical to ensure security, interoperability, and regulatory compliance across Europe.

Central to the project is the collaborative work of conformity assessment bodies, national certification authorities, and EUDIW providers to design, test, and refine core components of cyber and functional certification. This includes clarifying requirements, aligning interpretations, developing assessment methodologies, and identifying the foundations for national certification schemes.

EUDIW PACT provides a shared sandbox environment to enable experimentation and evidence-based refinement. Partners test evaluation processes, explore practical scenarios, and validate requirement applicability, revealing gaps, addressing ambiguities, and converging on feasible certification approaches.

Beyond technical development, the project strengthens the broader ecosystem by supporting Member States in formulating consistent certification strategies and contributing to European and international standardization efforts. By consolidating insights from technical work, stakeholder collaboration, and practical experimentation, EUDIW Pact produces actionable guidance, tools, and recommendations.

Ultimately, the project aims to deliver a robust, coherent, and trusted certification framework that empowers Member States and market actors to deploy EUDIW solutions with confidence.

## Evaluation Summary Report

**Evaluation Result**

**Total score: 9.50 (Threshold: 10 )**

**Criterion 1 - Relevance**

Score: **2.00** (Threshold: 3 / 5.00 , Weight: - )

**The following aspects have been taken into account (Items 3 and 4 may not be applicable to all topics see call document):**
**1 - Alignment with the objectives and activities as described in the Call document**
**2 - Contribution to long-term policy objectives, relevant policies and strategies, and synergies with activities at European and national level**
**3 - Extent to which the project would reinforce and secure the digital technology supply chain in the EU**
**4 - Extent to which the project can overcome financial obstacles such as the lack of market finance**

*The proposal is not adequately aligned with the objectives and the requested activities of the call as only one certified wallet is planned to be issued by end of 2026, even considering the high number of Member States participating in the proposed project. Consequently, the proposal does not adequately contribute to the policy objective of having certified wallets in all Member States by the end of 2026. This is a weakness.*

*In addition, the expected development of public procurement in the context of European Business Wallets is insufficiently considered. This is a shortcoming.*

*A positive aspect is the development of a joint certification scheme, offering modular wallet components.*

*A strength of the proposal is the cross-border certification approach, which is designed to support Member States lacking national accredited Conformity Assessment Bodies. However, it is insufficiently described how the proposal will facilitate the accreditation of CABs. This is a shortcoming.*

*It is only generically described how the proposal will contribute to long-term policy objectives, relevant policies and strategies, for example the Digital Decade Policy Programme 2030 of the European Commission, the European Digital Identity Framework, and EU priorities related to interoperability, trust, and digital sovereignty. This is a shortcoming.*

*It will contribute adequately to synergies with activities at European and national level as the proposal builds on previous results and aims to reuse national certification frameworks.*

## Criterion 2 Implementation

Score: **3.50** (Threshold: 3 / 5.00 , Weight: - )

**The following aspects have been taken into account:**
**1 - Maturity of the project**
**2 - Soundness of the implementation plan and efficient use of resources**
**3 - Capacity of the applicants, and when applicable the consortium as a whole, to carry out the proposed work**

*The maturity of the project is very good, and the proposal demonstrates a high level of preparation and readiness to start the implementation of the planned activities.*

*The implementation plan is not sufficiently aligned with the regulatory requirements and the project duration. For example, the certification deliverables are planned until month 11 and it is not clarified how the deliverables foreseen after milestone 10 will support the Member States' wallet certifications. This is a shortcoming.*

*Project management structures and decision-making processes are not appropriately defined, in particular how the budget allocation will be implemented in light of the described additional allocation mechanism. This is a shortcoming.*

*Surveillance and vulnerability assessments of the EU Digital Identity Wallet solutions, risk assessments tailored to the certification schemes to specific wallet architectures and implementations and processes for incident and vulnerability management, and escalation management system are not adequately addressed. This is a minor shortcoming.*

*Furthermore, it is not clearly described what the concrete contributions from each partner to the different work packages are. This is a minor shortcoming.*

*An appropriate risk management strategy is included, supported by a comprehensive risk register.*

*The use of the resources and the overall budget are not fully aligned with the described planned work and taking into account the planned reuse of existing components, the amount of the budget in WP1 and WP 2 is not sufficiently justified. This is a shortcoming.*

*The capacity of the applicants and the consortium as a whole to carry out the proposed work is very good. The consortium brings together Member State authorities, key stakeholders, and technical partners who have actively participated in the previous Large-Scale Pilots (LSPs) and in the EUDI Cooperation Group, which demonstrates active engagement over a long period of time and knowledge of the technical and legal ecosystem. Several Member States in the consortium have already established national governance structures for the EUDI Wallet, which shows commitment and provides the conditions for a more mature environment.*

## Criterion 3 - Impact

Score: **4.00** (Threshold: 3 / 5.00 , Weight: - )

**The following aspects have been taken into account (Item 3 may not be applicable to all topics see call document):**
**1 - Extent to which the project will achieve the expected outcomes and deliverables referred to in the call for proposals and, where relevant, the plans to disseminate and communicate project achievements**
**2 - Extent to which the project will strengthen competitiveness and bring important benefits for society**
**3 - Extent to which the project addresses environmental sustainability and the European Green Deal goals, in terms of direct effects and/or in awareness of environmental effects**

*The proposal falls short in addressing the expected outcomes and deliverables referred to in the call for proposals.*

*The quantitative KPIs are too generically defined and do not provide adequate metrics or target values. The qualitative indicators do not provide a methodology or sufficient details to allow any measurement. This is a shortcoming.*

*The plans for the dissemination and communication are generically presented, with a focus on existing channels from other EU Digital Identity Wallet projects and large-scale pilots, national initiative activities, stakeholder and expert networks, and the participation in relevant coordination meetings.*

*The proposal demonstrates adequately how the proposed project will strengthen the European digital identity ecosystem by potentially reducing fragmentation and enabling the participation of Member States with limited national certification capacity.*

## Scope of the application

Status: **Yes**

**Comments (in case the proposal is out of scope)**

*Not provided*

## Exceptional funding

**Entities from countries mentioned in the work programme (if any) are only exceptionally eligible, if the granting authority considers their participation essential for the implementation of the action.**
**Please list the concerned applicants and requested grant amount and explain the reasons why.**

**Based on the information provided, the following participants should receive exceptional funding:**

*Not applicable.*

**Based on the information provided, the following participants should NOT receive exceptional funding:**

*Not applicable.*

## Artificial Intelligence

Status: **No**

**If YES, the technical robustness of the proposed system must be evaluated under the appropriate criterion.**

## Are security restrictions as per Article 12(5) and (6) applicable?

Status: **No**

**If security restrictions apply and one (or more) applicants are found controlled from third countries (or third country entities), is the project feasible without the controlled entities?**

*No*

**Can the work be taken over by one of the other participants or will it be necessary to add new ones?**

*No*

*Not provided*

## Overall comments

Digitally sealed by the European Commission
